- Penile exercisers say is, "An absolute must if you are serious about penis enlargement!"
- Academics say is, "A first of its kind . . . a guide on penis health for both the medical-health industry and the layperson, as well as an educational tool for academics like me." -From the book's foreword by Deby Cassill, Ph.D., professor of Biology and Sex and Today's World at the University of South Florida.
- Doctors says is, "A courageous pioneering work that is presented in a logical, sequential way." -From the book's introduction by Dr. Richard Howard II, Doctor of Public Health.

Founder of The Penis Enlargement Gym

Before the book there was, and always will be, The Penis Enlargement Gym. PEGym.com was created by Kemmer as man's gateway to free, easy-to-read penile exercising information. Since its conception in 2005, The Penis Enlargement Gym has transformed into a community of people who care about furthering the knowledge of penile exercising, both scientifically and practically.

Furthering Science

At the heart of it, Kemmer created The PE Gym with a focus on science. The website was originally developed to hold the penis enlargement survey results. The reason: As funny as it may seem, most of the world believes "penis enlargement" is about as likely as the UF Gators' Football team winning the Super Bowl. In other words, they believe it to be impossible. Kemmer set out to do his part to change that.

Since the release of the survey results in 2005, Kemmer has made connections with doctors, academics, and scientists with the goal of bringing the truth about penis enlargement mainstream along with building more scientific data on the benefits of penile exercising. Current projects Kemmer is working on include helping conduct more surveys, doing a scientific study, and researching ways to help men gain more in a quicker time period.
